Computer Engineering Student | Financial Computing

Data & AI · Banking & Insurance · Full-Stack Development

Seeking a six-month final-year internship starting February 2027

PROFILE

Computer engineering student specialising in financial computing, with experience in insurance data analysis, actuarial modelling, cybersecurity and financial process digitalisation. Interested in applying software development and machine learning to banking and insurance.

EDUCATION

ESPRIT - École Supérieure Privée d'Ingénierie et de Technologies

Engineering Degree in Computer Engineering, specialisation in Financial Computing
2022 - 2027 (expected) | Final-year student

Coursework: Applied Machine Learning, Stochastic Processes, Monte Carlo Methods, Mathematical Models for Finance, Life & Non-Life Actuarial Science, Information Systems Architecture, SOA and DevOps. Financial Markets, Interest Rate Risk and Derivatives, Actuarial Calculations, Risk Theory and Measurement, Software Testing and Validation, CSR and SDGs.

WORK EXPERIENCE

BIAT Assurances | Data & Non-Life Actuarial Intern

Jun 2026 - Aug 2026 | Tunis, Tunisia

- Analysed comprehensive motor insurance policy and SAP claims data covering 2019-2023.
- Cleaned, reconciled and validated datasets; performed statistical analysis using Python, Pandas and Excel.
- Applied CRISP-DM to study claims frequency, exposure and risk factors.
- Modelled claims frequency using generalised linear models (GLMs) and explored machine learning approaches for risk analysis and insurance pricing.

Forvis Mazars - Security Excellence Center | Cybersecurity Intern

Jul 2025 - Aug 2025 | Tunis, Tunisia

- Designed and deployed a Snort-based network intrusion detection system (IDS).
- Created custom rules to detect port scans and suspicious ICMP, SSH, FTP, DNS and HTTP traffic.
- Deployed the Elasticsearch, Logstash and Kibana (ELK) stack with Docker and configured an alert-processing pipeline.
- Built Kibana dashboards and validated the solution through simulated attack scenarios.

Tunisie Telecom | Introductory Intern

Jun 2022 | Kairouan, Tunisia - Introduction to internal processes and teamwork.

TECHNICAL SKILLS

Data & AI: Python, Pandas, GLMs, Random Forest, XGBoost, Logistic Regression, K-Means, PCA

Development: Java, Spring Boot, Angular, TypeScript, JavaScript, C/C++, JavaFX, REST APIs

Databases & analysis: SQL, MySQL, Oracle, MongoDB, Excel

Security & DevOps: Snort, ELK, JWT, LDAP/Active Directory, Docker, Git/GitHub, Linux

Methods: CRISP-DM, Agile/Scrum

SELECTED PROJECTS

CREDIGUARD | Intelligent FinTech Ecosystem

Built e-commerce and user/security modules with JWT, roles, permissions and password recovery. Integrated ML scoring and segmentation models. **Stack:** Angular, Spring Boot, Flask, MySQL.

BANKING WORKFLOW | Business Process Digitalisation

Developed a secure banking application with REST APIs, Active Directory authentication, JWT and user, role and permission management. **Stack:** Spring Boot, Angular, Oracle, LDAP.

AURALIS | AI & Financial Risk Management | 3rd Place, Entrepren'Up

Designed a FinTech solution combining AI, BI and cybersecurity for financial risk management. Contributed to technical design, financial analysis, business planning, market research and the pitch.

CERTIFICATIONS & VIRTUAL JOB SIMULATIONS

Dataiku Core Designer | Dataiku | Sep 2026

EY - Technology Risk Job Simulation | Forage | Sep 2026

Mastercard - Cybersecurity Job Simulation | Forage | Sep 2026
